

# SELENIUM AUTOMATION TESTING WITH PROJECT IMPLEMENTATION

## FRAMEWORKS:

## TRAINING KEY POINTS:

- Resume Preparation
- Interview Questions
- Mock Interviews
- One Bank Project
- Placement Assistance

# COURSE CONTENT

## Module I - PRE-SELENIUM (Core Java programming)

### Chapter 1 - Core Java introduction

- Introduction of Java
- Downloading and installing java
- JDK, JRE, JVM overview
- What is eclipse?
- Download eclipse
- Configure Java with eclipse
- Creating a new Java project
- Create and execute sample Java program
- What is a package

### Chapter 2 - Class and Objects

- What is a Class?
- What is an Object?
- Why do we need Objects?
- How to create objects?
- Java naming standards

### Chapter 3 - Data Types in Java

- What is a Data Type?
- Java Data Types
- What are Primitive data types:
  - byte, short, int, long, char, Boolean, double, float.
- Primitive data types memory sizes and Range Values
- Where are Reference or Non primitive Data Types
- Difference between Primitive and non-primitive data types
- Data type casting

## **Chapter 4 - Operators in Java**

What is an operand

What is an operator

Java Operators

Unary Operator

Minus

Pre and post increment

Pre and post decrement

Binary operator

Arithmetic operators

Assignment operator

Relational or Comparison operators

Logical operators

Ternary Operator

## **Chapter 5 - Variables in Java**

What is a Variable

Types of variables in Java

What is Global Variable?

What is instance, static, local and block variables

Accessing instance, static, local and block variables

Default values for variables

Difference between instance, static, local and block variables

## **Chapter 6 - Conditional Statements or Control Statements**

What is a conditional statements?

Java conditional statements

If statement

If else statement

If else if statement

Switch statement

Sample Java programs on conditional statements

## **Chapter 7 - Loop statements or Iterative statements**

What is a loop statements?

Java loop statements

for

while

do

for each

break keyword

continue keyword

Sample java programs on loop statements

## **Chapter 8 - Reading data during execution**

By using Buffered Reader

By using Scanner

Difference between Buffered Reader and Scanner

## **Chapter 9 - Methods**

What is a method

Advantages of method

What is code reusability and how can we implement with methods

Types of methods

What are method parameters

What is instance method and how to execute

What is static method and how to execute

this keyword usage

## **Chapter 10 - Constructors**

What is Constructor

Constructor uses

Types of Constructors

Default Constructors

User defined constructors

Super keyword usage

## **Chapter 11 - Arrays**

What is an Array

How to declare a new array in Java

Types of Arrays in Java

Assigning values into array

Accessing values from array

Finding size of an array

Drawback of Arrays

## **Chapter 12 - Collections**

What are a collection in java

Java Collections Types

List Collection

Set Collection

HashMap

## **Chapter 13 - Exception Handling**

What is an exception in java?

Creating exception in java

Handling exception with try and catch blocks

finally keyword

Types of Exceptions

## **Chapter 14 - Working with Strings**

What is a String

Declaring a String in java

String class and StringBuffer class

Mutable and immutable string in java

String class methods

Important Java programs with String class methods.

## **Chapter 15 - Workign with External Files - MsExcel and NotePad**

Working with Excel

Why do we use Excel files in Automation projects

Finding given Excel file is exist or not?

Creating a new Excel file

Entering data into Excel file

Reading data form Excel file

Working with Notepad

Why do we use NotePad files in Automation projects

Finding given notepad file is exist or not?

Creating a new notepad file

Entering data into notepad file

Retrieving data from notepad file

## **Chapter 16 - Working with Database**

Why do we use Database concepts in Automation projects

Java programs for Database connections and executing queries

## **Chapter 17 - Working with Date and Time**

Sample scenarios on Date and Time methods in Automation projects

Java programs for retrieve current date and time

Java program for finding difference between given dates

## **Chapter 18- OOPs Concept**

Classes and Objects

Inheritance

What is Inheritance in java

What are the usages of Inheritance in Java

How to implement Inheritance in Java

Types of Inheritance

Access modifiers in java - public, private, protected and default

this and Super Keywords in java

### Polymorphism

What is Polymorphism in java

What is method overloading and Method Overriding

Compile and Runtime polymorphism

### Abstraction

What is Abstraction

Implementing Abstraction with interface

What is interface

Creating new interface

Implementing method overriding with interface

Implementing multiple inheritance with interface

### Encapsulation

What is Encapsulation in Java

Implementing Encapsulation with getter and setter methods

## **Chapter 19- Debugging**

What is Debugging?

Why do we use Debug Execution?

Debug Option

## **Module II - Selenium Automation**

### **Chapter 1 - Selenium Introduction**

What is Manual and Automaton Testing?

Drawbacks of Manual and advantages of Automation Testing

Why Selenium?

What is Selenium?

Selenium History

Selenium Components

Selenium IDE

Selenium RC

Selenium WebDriver

Selenium Grid

Advantages of Selenium

Limitations of Selenium

### **Chapter 2 - Selenium WebDriver set up**

Required software for WebDriver set up

Download Selenium WebDriver jar

WebDriver set up with Java project

WebDriver set up with Maven project

Difference between Java and Maven projects

### **Chapter 3 - Working with Browsers**

Working with Chrome browser

Working with Edge browser

Working with Firefox browser

Working with Safari Browser

Working on browser commands

### **Chapter 4 - Locating Elements**

What are Elements in Web application

How to locate elements with Selenium

Types of locators - id, name, className, linkText, partialLinkText, tagName, xpath, cssSelector

What is xpath

Types of xpath

Limitations of absolute xpath and advantages with relative xpath

xPath functions

text, contains, last, following, ancestor, child, preceding, following-sibling, self, descendant

## **Chapter 5 - Working with Elements**

Working with Text box

Selenium scripts related to Text box

Working with Multiline text box

Selenium scripts related to Multiline Text box

Working with links

Selenium scripts related to links

Working with buttons

Selenium scripts related to buttons

Working with check boxes

Selenium scripts related to check boxes

Working with radio buttons

Selenium scripts related to radio buttons

Working with dropdowns

Selenium scripts related to dropdown

Working with broken links

Selenium scripts related to broken links

## **Chapter 6 - Working with Mouse and Keyboard operations**

click an Element

Right click on links and select right click options

Double click on elements  
Mouse over on the element  
Drag and Drop Elements  
Sending Keyboard keys to applications

### **Chapter 7 - Working with multiple browser windows**

getWindowHandle and getWindowHandles methods  
open a new browser window with selenium  
Retrieve total number of browsers are opened in script  
Switch to required browser window  
Close required browser window

### **Chapter 8 - Handling Alerts**

What is alert  
Types of alerts  
    Web based alert  
    Window based alert  
Selenium Alert interface  
Methods of Alert interface  
Working in web-based alerts  
Working on window-based alerts  
Working on Robot class

### **Chapter 9 - Handling Frames**

What is a Frame?  
Types of Frames - nested frame and multiple frames  
Switch to frame, nested frame and multiple frames

### **Chapter 10 - Web Table**

What is a web table  
Understanding html code for web table  
Locating Webtable, particular row and particular cell

## Selenium programs related to Web table

- Retrieve total number of rows
- Retrieve total number of cells for a given row
- Retrieve given cell value
- Retrieve all cell values
- Finding given text is exist in a web table
- Performing operations on Web table elements

## Chapter 11 - Working with Screenshots

- Why do we need Screenshots in Automation process
- Selenium program to take a screenshot of a page

## Chapter 12 - Synchronization

- What is Synchronization?
- Types of Synchronizations
- Handling Synchronizations in Selenium
  - Unconditional Synchronization
    - With java - Thread.sleep()
    - With Selenium - Sleeper class
  - Conditional Synchronization
    - By using implicit wait
    - By using Explicit wait
    - What are the Explicit wait conditions are available
    - Difference between implicit and explicit wait

## Chapter 13 - Element Repository

- What is Element Repository
- What is a property file and create a new property file in eclipse
- Adding element locators into property file
- Retrieving element locators from property file
- Reading data from property file and implementing

## **Chapter 14 - Miscellaneous Topics**

Selenium listeners

Types of exceptions in Selenium

Assert and Verify commands

Working on Headless testing

Git Hub

Jenkins

Selenium Grid

## **Chapter 15 - Selenium Frameworks**

What is a framework

Importance of Framework for automation project

Types of Frame work

Page Object Model

TestNG

Cucumber

Data Driven

Modular Driven

Hybrid (Cucumber, Page Object Model with Data Driven)
